

Conversion to UiPath from BluePrism or Automation Anywhere

Process for Migrating to UiPath:

- ✓ Mitigate
- ✓ Rewrite
- ✓ Retire

Smart Migration Planning to Optimize the Journey from Your Existing RPA Platform to UiPath

Switching to UiPath, the RPA technology that is accelerating the pace of digital transformation for all industries, can be accomplished quickly and at a cost that enables a rapid return on investment. Optezo's Conversion to UiPath Planning Workshop is the ultimate value tool to help your enterprise realize the immense business benefits of a UiPath migration.

A Precisely Architected Process for Migrating to UiPath

At Optezo, we remove the need for a costly and resource-intensive UiPath migration. Our Conversion to UiPath Planning Workshop creates a roadmap that makes the process understandable, intelligent, and hassle-free:

Converting RPA processes to UiPath from your existing platform unlocks incredible benefits of scalability, deployment, continuous improvement, and value. However, most enterprises struggle with the expertise and resource requirements to successfully manage a smooth migration.

Mitigate

Optezo provides conversion services to UiPath from Blue Prism and Automation Anywhere. We move you quickly and securely to the world's leading RPA solution

Rewrite

Our roadmap assesses individual RPA processes and functions to determine adjustments needed to gain the most value. Optezo's migration methodology scopes out the RPA rewrite plan to precisely align with your business needs

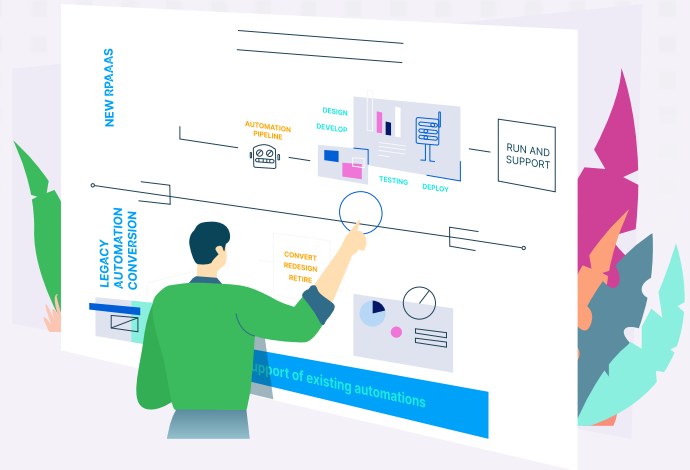

Retire

Completed migration allows safe and secure legacy platform retirement, including a transition to ongoing support for legacy automations required for compliance or other purposes

Optezo's Conversion to UiPath Planning Workshop delivers optimal value at each stage:

1. Inventory & Management

The workshop begins by establishing baselines of your current business processes and automations:

- ✓ Interview stakeholders and review documentation to populate a complete process list
- ✓ Identify critical processes, systems and technologies
- ✓ Identify key automations that support these critical processes
- ✓ Document key automation workflows

2. Ranking & Sizing

The next step in the workshop is ranking the UiPath automation potential of the current automations and assessing the size of the migration/conversion process:

- ✓ Automations are ranked according to business benefit, automation readiness, and ease of implementation
- ✓ High-level process flows are documented

3. Conversion Planning

Analysis is performed to identify the most suitable sequence of automation conversions, creating the UiPath migration roadmap:

- ✓ Each automation is tagged with a T-Shirt Size
- ✓ Automation development sequence is established
- ✓ Appropriate UiPath licensing is recommended (if necessary)
- ✓ Pilot program automations are identified

Our Conversion to UiPath Planning Workshop is generally performed in a **2-3 week timeframe** but can be customized for your organization's needs.

Make Your UiPath Migration Better, Faster, Simpler

Begin planning your migration to UiPath today: let's talk about how Optezo's Conversion to UiPath Planning Workshop can make your journey less complex and deliver more value. We can help you earn maximum ROI from your automation functions.
