

Robotic Process Automation in the Financial Services Industry

What's Inside:

- ✓ The benefits of RPA for Financial Services organizations
- ✓ Top Financial Services RPA Use Cases
- ✓ Reach RPA at scale quickly and reliably

Online banks have demonstrated the power of robotic process automation (RPA) to the rest of the financial services industry. They have seen explosive growth and popularity due to the perceived instantaneity of their offerings.

The rest of the financial services industry is now catching up with the adoption of RPA. The industry traditionally relied on outsourcing labor-intensive business processes to cheaper, overseas workforces. This model still works but it is exposed to risks such as wage increases and regulations regarding sending data overseas. Robotic process automation has matured in recent years. RPA is now capable of keeping all financial services processes in-house. RPA can handle any repeatable process in retail banking, commercial lending, consumer lending, and wealth management. Furthermore, it yields a better return on investment than any international outsourcing solution. Used properly, RPA can speed up processes, clear bottlenecks and enable your team members to use their creativity and innovation for the benefit of your customers.

✓ **Retail Banking Operations**

Retail banks invest resources into laborious back-office administration. Those resources could otherwise be used to improve the quality of the banks' offerings.

✓ **Know Your Customer**

All financial services providers invest resources into verifying identity of their customers, evaluating suitability for financial products, and weighing the risks of doing business with them

✓ **Mortgage Lending**

During loan origination, both commercial and consumer lenders spend time and money on collating data from a wide array of disparate internal and external systems.

✓ **Human Resources and Organization**

Employees can both intentionally and unintentionally misrepresent their working hours on timesheets. All types of organizations need to continuously monitor for inconsistencies to investigate further.

The benefits of RPA for Financial Services Organizations

In fact, the more processes you're able to automate, the happier your employees become. Because RPA robots turn employees into super-employees. They allow your employees to be more human by giving them back time to focus on more fulfilling, nuanced—in short, more human—endeavors. Let your employees find more joy in their work by leaving the calculations to the calculators.

Generate SARs Reports with One Click

Financial services providers are required by law to provide regulators with reports of fraudulent transactions called suspicious activity reports (SARs). Conventionally, compliance officers of financial services providers compile these reports manually by referencing lengthy compliance documentation and extracting information from internal datasets. An RPA robot can now use natural language processing to comprehend the compliance documentation and extract the required information automatically.

Freeze Stolen Credit Cards Instantly

Credit card companies and retail banks that issue credit cards are exposed to the risk of losing money when their customers' credit card information is stolen. Credit card providers race to freeze affected accounts when retailers reveal that they suffered a data breach. Traditionally in these time-pressured situations, human support agents manually lookup and process the affected credit card accounts based on the information provided by the retailers. RPA can automate the freezing process, saving credit card providers from labor costs as well as the costs associated with reversing or absorbing fraudulent transactions.

Execute Securities Trades Automatically

Wealth management organizations frequently order trades of securities according to a predetermined set of rules or conditions. Humans have to place the trades manually because few trading software platforms support the level of custom automation needed. An RPA robot is capable of taking over the menial, repetitive task of ordering trades, freeing up more of wealth managers' time to spend on client relations and strategic planning.

Beat the Returns of Human Outsourcing

It is a common belief among executives that outsourcing to cheaper human labor overseas will cut costs in half. While hourly rates may be lower, executives don't consider the hidden costs that come from factors like the loss of in-house business knowledge, the consequences of 3rd parties failing to deliver, wrong assumptions made from cultural misalignments, and uncontrollable management turnover.

Robotic process automation delivers clear-cut cost savings and returns on investment with none of the hidden costs above.

The Optezo process catalog provided the needed jump start for our Digitization initiative...our ROI results are transparent and actively managed to ensure ongoing success

Top Financial Services RPA Use Cases

Let robots handle the tedious and repetitive back-office financial services tasks so that your organization can invest more into new products and services.

Retail Banking Operations

Robots can relieve a bank's back-office staff by automating administrative tasks such as the updating of customer information, reconciliation of transactions, and closure of accounts.

Mortgage Lending

Robots can automate the checks required by law for commercial and consumer mortgage lending. Robots can fetch, collate, and analyze data from sources such as credit reports, tax returns, and employment history.

Know Your Customer

Optezo can train robots to perform identity checks, background screenings, financial fraud searches, and anti-money laundering checks in the same way that a human can, pulling data from multiple external sources.

Human Resources and Organization

Robots can automate the management of employee data, identify timesheet omissions and errors, and flag inconsistencies between employee scheduled hours and reported hours.

WHY OPTEZO

Reach RPA at scale quickly and reliably

Automation Specialists

RPA is all we do. Our experts are trained professionals have spent years working with complex systems in large enterprise organizations. We know the Enterprise and we know RPA.

Fast Track to ROI

Optezo's RPA strategy services and our curated RPA process catalog will help you quickly get going with a successful RPA program.

Flexible Engagement

While our All-in-One offering is most popular, we make it easy to engage with us wherever you are in your RPA journey. Optezo can meet you where you feel we will be most valuable.

These use cases (and more!) are from the Optezo Process Catalog. The benefits are real. Start now.
